The present sequence is that of a rat histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA subtype, as predicted from a cDNA clone isolated from a spleen cDNA subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (mee AALT0980-83) and polypeptides (see AAMS0564-67). The nucleic acids have been expressed in polypeptides (see AAMS0564-67). The nucleic acids have been expressed in pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of thistamine H4 receptor activity. Recombinant protein is useful for identifying medulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, candidovascular and carebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a guinea pig histamine receptor of the H4 subtype, as predicted from a CDNA clone isolated from a bone marrow library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAMS0564-67). The nucleic acids have been expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding

recombinant host cells that produce active recombinant protein. The histamine Hy receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine Hy receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                           G protein-coupled receptor; nGPCR; seven transmembrane receptor; signal transduction; schizophrenia; thyroid disorder; renal failure; rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neuronal disorder; Alzheimer's disease; cancer; attention deficit-hyperactivity disorder/attention deficit disorder; Parkinson's disease; migraine; senile dementia; inflammatory disease; neuroprotective.

The present invention relates to novel G protein-coupled receptors

(nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28,
31-38, 40, 41, 53-60) and their coding sequences. The present sequence is

consuch G protein-coupled receptor. GPCRs are also known as seven

consuch G protein-coupled receptor. GPCRs are also known as seven

coding sequences are useful for screening a human to diagnose a disorder

coding sequences are useful for screening a human to diagnose a disorder

coding sequences are useful for identifying compounds useful for

creating schizophrenia. Detection of nGPCRx in a sample is useful as a

contagnostic tool for diseases or disorders e.g. thyroid disorders, renal

configuration deficit and cardiovascular diseases, proliferative disorders and

chormonal disorders. Modulators of nGPCRx activity have the utility for

treating neurological disorders in nocluding schizophrenia, ADHD/ADD

conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune

conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune

disorders, cancers all alsorders all and seconds and inflammatory

conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune

disorders cancers and respirators and inflammatory

conditions (e.g. crohn's hours) as asthma, and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                               The invention relates to splice variants of human H4 histamine receptor, H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for recating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4c protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; G protein coupled receptor; GPCR; transmembrane receptor; identification; agonist; screening; therapeutic; pharmaceutical; mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human G protein coupled receptor hRUP7 protein SEQ ID NO:14.

                                                                                                                                                                                         The invention discloses an isolated human polypeptide, and encoding nucleic acid, for a G protein-coupled receptor (GPCR), particularly the nucleic acid, for a G protein-coupled receptor (GPCR), particularly the communication between cells and their environment and are characterised communication between cells and their environment and are characterised by a serpentine structure that passes through the cell membrane seven times, hence the receptors are sometimes called seven transmembrane receptors (TMM). The polypucleotides and polypeptides are useful for identifying an nGPCR allalic variant that correlates with a custom polypeptide and/or modulates its biological activity, for screening a human subject to diagnose a disorder, or a genetic predisposition to a disorder, affecting the brain or a genetic disposition to the disorder. Cor identifying a compound useful for the treatment of a mental disorder and for identifying a compound useful as a modulator of binding between GPCR-14 and a binding partner of nGPCR-14. The polypeptide is also useful for inducing an immune response in a mammal. The nucleic acid or polypeptide is particularly useful, using gene therapy, for treating e.g. mixiety disorders, depression, bipolar disorder, schizophrenia, considered in a mammal. The nucleic acid or anxiety disorders, disease, dyskinesias, manic depression, stroke, Parkinson's be used for treating diabetes, inflammation or wounds. The sequences or presented in ABG931795 and ABG931795 are the nGPCR (also presented in ABG931795 and ABG931795 are the nGPCR (also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46116 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                          Non-endogenous, human G protein-coupled receptors for screening receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; orphan G protein-coupled receptor; GPCR; hRUP7; drug screening; transmembrane receptor; signal cascade.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present amino acid sequence is the hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation in expression analysis to provide information about their function in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel human orphan G protein-coupled receptors and the encoding cDNAs for use in the identification of G protein-coupled receptor agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      G-protein coupled receptor; GPCR; PFI-013; antiallergic; antiasthmatic; antiinflammatory; vasotropic; antidiabetic; anorectic; cytostatic; human; osteopathic; neuroprotective; nootropic; dermatological; gynecological; signal transduction.

```
The present sequence is that of the human G protein-coupled receptor protein BG26, which shows significant homology with histamine H3, with activity of binding to histamine and capable of changing intracellular cAMP concentration in response to its simulus. The protein is applicable as a tool in screening ligands or drug candidates for regulating signal transduction from such protein and treating diseases associated with its
                                                                                                                                                                                                                                                                           G protein-coupled receptor protein BG26, with activity of binding to histamine and capable of changing intracellular cAMP concentration in response to its stimulus, applicable as tool in screening ligands or drug candidates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; guanosine triphosphate-binding protein-coupled receptor; GPRV53; intracellular calcium ion regulation; histamine receptor; leukocyte.

PREVEST. GERVES is a new type of histamine receptor which is preferentially expressed in peripheral leukocytes and on stimulation with histamine causes a change in intracellular calcium ion concentration. GERVES is useful in the identification of antagonists and agonists of histamine binding to GERVES and disorders. Also, since the receptor protein is preferentially expressed in tissues (especially in peripheral leukocytes) other than those associated with the known histamine receptor types H1-H3 it is useful in the investigation of the role of histamine and its receptors in the tissues in which it is expressed
                           cation of agonists and antagonists as drugs active in histamine-

the invention relates to the numbal of protein-coupled receptor AKOR35 cand variants in the invention relates to the numbal of protein-coupled receptors. AKOR35 has and variants. Like all G protein-coupled receptors, AKOR35 has card and variants. Like all G protein-coupled receptors, AKOR35 has composed in signal transduction. AKOR35 has homology and structural similarity with G protein-coupled receptors such as the human histeranian H3 receptor. The invention also relates to recombinant expression of AKOR35, and to an AKOR35-specific antibody. AKOR35 proteins and nucleorides may be used to treat a wide variety of disorders including bacterial fungal, protozoal and viral infections, particularly HIV-1 or HIV-2 infections; pain; cancers; benign prostatic hypertension; allereis including bacterial infarction; stroke; ulcers; migraine; vomiting; chapters; obesity; anorexis, bulimia; osteoporosis; asthma; allereis; companied depression, depression, depression, stroke; ulcers; migraine; vomiting; chapters; obesity; anorexis, bulimia; osteoporosis; asthma; allereis; comition; and neurological disorders such as anxiety, schizophrenia, pectoris; myocardial infarction; stroke; ulcers; migraine; vomiting; chapteris; myocardial infarction; stroke; ulcers; migraine; vomiting; completed and neurological disorders such as anxiety; schizophrenia, completed and neurological disorders and services and surface and services, and AKOR35 proteins, and dyskinesis, and AKOR35 proteins, mucleotides and untibodies are useful for treating asthma, and inhibiting or promoting to articolate architecture and completed and antibodies are also constituted and completed and antibodies are also consetulated to a the detection of abnormal levels of protein or manal against the detection of mutations in the corresponding gene. AKOR35 proteins are also useful for inducing an immunological response in a manal against the above diseases, and for producing transgenic animal submit or variance and useful so trading are also useful for producing are us
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·.
                        treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma.
                                                                                                                                                           the invention relates to the human G protein-coupled receptor AXOR35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
Novel G-protein coupled receptor polypeptide and polynucleotide for treating cancer, autoimmune, pulmonary, cardiovascular and neurologic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4; Length 390;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Indels

Lind P, Domain Domain Domain Domain Domain Domain Domain Key

This sequence represents a novel human G protein-coupled receptor (GPCR) designated nGPCR-2067. Like all GPCR8, nGPCR-2067 has 7 putative cransmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising involution also relates to expression vectors and host cells comprising concleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067 acids in cells and specific for nGPCR-2067, to drug screening methods that use nGPCR-2067, and to modulators of nGPCR-2067 activity. nGPCR-2067 and species homologues and may also used in genetic mapping. The invention also discloses the use of nGPCR-2067 nucleic acids in screening for a predisposition to nGPCR-2067-associated hereditary mental consorters, or for the diagnosis of these disorders. nGPCR-2067 nucleic acids may additionally be used to generate transgenic animals, including consorters, and may also be used in the design of antisense molecules for suppressing expression of nGPCR-2067 in cells. nGPCR-2067, and nGPCR-2067 modulators may be used to treat a wide variety of medical conditions, particularly mental disorders, central nervous system conditions, particularly mental disorders, enciral nervous system conditions, particularly mill solved to reat a wide variety of medical contitions, particularly HIV-2 infections, pain, central convirs, and netabolic diseases because that may be treated included viral infections, particularly HIV-2 infections, pain, central nervous system, neurological and psychotic disorders such as Hutingfon's disease, and metabolic disease, and parkinson's disease; proliferative dementia, Alzheimer's disease, and Parkinson's disease; proliferative dementia, hyroid disorders such as dancers, benign prostatic hypertophy, and anorexia; thyroid disorders, cardiovascular diseases such as hypotension, anorexia; thyroid disorders, cardiovascular diseases such as hypotension, anorexia; thyroid disorders; cardiovascular diseases such as hypotension, anorexia; hypotensio New polynucleotide, useful for identifying modulator compounds which are used for treating psoriasis, schizophrenia, diabetes, encodes the novel G protein-coupled receptor (nGPCR) polypeptide (nGPCR-2067). hormonal disorder; renal failure; anti-HIV; analgesic; cytostatic antidiabetic; metabolic; hypertensive; hypotensive; thrombolytic; cardiant; antiatherosclerotic; neuroleptic; antimigraine; antiparkinsonian; tranquiliser; antidepressant; neuroprotective; anticonvulsant; antifflammatory; antirheumatic; antiathritic; antipsoriatic; gene therapy; receptor. /label= Transmembrane_domain_5 305. .326 /label= Transmembrane_domain_6 342. .360 /label= Transmembrane_domain_7 19. .41

```
This sequence represents the amino acid sequence of a human histamine receptor (HR) designated SP9144. The sequence was isolated by searching databases with the sequence of known G-cowpled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity chromatography, in immunoassay of histamine receptor, to identify CDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                   anti-asthmatic; anti-allergic; dermatological; cerebroprotective; stroke anti-migraine; cardiant; anti-rheumatic; anti-arthritic; antipsoriatic; neuroprotective; inflammation; asthma; allergy; atopic dermatitis; myocardial infarction; migraine; chronic obstructive pulmonary disease; rheumatoid arthritis; multiple sclerosis; inflammatory bowel disease;

Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polynucleotide are useful in the treatment and management of diseases such as inflammation, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, incellular growth rate, secretion of hormones, receptor-stimulated Ca2+mobilization, mitogenic effects, etc

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                          US-10-626-445-8

Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist.) Agonist stimulation of isoform 3 niether modified adenylate cyclase activity in the absence of adenylate cyclase activity nor induced intracellular calcium mobilization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Coge F., Guenin S.-P., Audinot V., Renouard-Try A., Beauverger P., Macia C., Ouvry C., Nagel N., Rique H., Boutin J.A., Galizzi J.-P., "Genomic organization and characterization of splice variants of the

                                                                                                                                                                                                                                                                                                                                                                                                                                           -I-TISSUE SPECIFICITY: Expressed predominantly in the CNS, with the greatest expression in the thalamus and caudate nucleus. The various isoforms are mainly coexpressed in brain, but their relative expression level varies in a region-specific manner. Isoforms 3 and 7 are highly expressed in the thalamus, caudate nucleus and carebellum while isoforms 5 and 6 show a poor expression. Isoforms 5 and 6 show a high expression in the amygdala, substantia nigra, cerebral cortex and hypothalamus. Isoform 7 is not found in hypothalamus or substantian nigra.
-!- DISEASE: Defects in HRH3 are a cause of Shy-Drager syndrome [MIM:146500]. This syndrome is characterized by orthostatic hypotension, bladder and bowel incontinence, anhidrosis, iris arcophy, amyotrophy, ataxia, rigidity and tremor.
-!- MISCELLANEOUS: Does not bind to cimetidine and tripolidine. Shows modest affinity for thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methylhistamine. Isoform 4 is unable to bind to indoproxyfan while isoforms 1 and 3 bind it with high affinity.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                POTENTIAL.

This SMISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation—the Buropean Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                                                                       Isoid-090XN8-4; Sequence-VSP 001888, VSP 001889; TISSUE SPECIFICITY: Expressed abundantly in brain, most notably throughout the thalamus, the ventromedial hypothalamus and the caudate nucleus. Isoform 1 is largely predominant in all tissues. MISCELIANEOUS: Proxyfan acts as a potent neutral antagonist while thioperamide, ciproxifan and FUB465 act as potent inverse
                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
(in isoform 2). (POTENTIAL). ;p 001887.
                                                                                                                                                                                                                                                                                                                                                                                  ;

-!- FUNCTION: Receptor for prokineticin 2. Exclusively coupled to the G(q) subclass of heteromeric G proteins. Activation leads to mobilization of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hypothalamic nucleus, paratenial thalamic nuclei, paracentral halamic nucleus, lateral habenular nucleus, lateral septal nucleus, lateral globus pallidus and amygdala. Highest expression seen in paraventricular thalamic nuclei and is also extensively syptessed in the suprachiasmatic nucleus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Expressed in several regions of the brain, including paraventricular hypothalamic nucleus, dormal medial

CG G(G) subclass of heteromeric G proteins. Activation leads to
mobilization of calcium, stimulation of phosphoinositide turnover

G(G) subclass of heteromeric G proteins. Activation leads to
mobilization of calcium, stimulation of phosphoinositide turnover

G(G) subclass of heteromeric G protein.

CC and activation of p44/p42 mitogen-activated protein kinase (By
CC similarity).

CC -1 SUBCELLUIAR LOCATION: Integral membrane protein.

CC -1 TISSUB SPECIFICITY: Abundantly expressed in the CNS and
crepbellum, testis and ovary.

CC -1 SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10-0CT-2003 (Rel. 42, Created)

Blophys. Res. Commun. 293:396-402(2002).

-- FUNCTION: Receptor for prokineticin 2. Exclusively coupled to the GG subclass of heteromeric G proteins. Activation leads to GG subclass of heteromeric G proteins. Activation leads to and activation of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-OCT-2003 (Rel. 42, Created)

```

Nature 414:865-871(2001).

-!- FUNCTION: Receptor for prokineticin 2. Exclusively coupled to the G(q) subclass of heteromeric g proteins. Activation leads to mobilization of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase.
-!- SUBCELULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Expressed in the ileocecum, thyroid gland, pituitary gland, salivary gland, adrenal gland, testis, ovary and

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way endified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch). -i- SIMILARITY: Belongs to family 1 of G-protein coupled receptors. -i- CAUTION: Ref.3 sequence differs from that shown due to erroneous gene model prediction.

J. Biol. Chem. 277:19276-19280(2002)
J. Biol. Chem. 277:19276-19280(2002)
J. FUNCTION: Receptor for prokineticin 1. Exclusively coupled to the cid subclass of heteromeric G proteins. Activation leads to mobilization of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase.
J. SUBCELULUAR LOCATION: Integral membrane protein.
TISSUB SPECIFICITY: Expressed in the stomach, throughout the small intestine, colon, rectum, thyroid gland, pituitary gland, salivary gland, adrenal gland, testis, ovary, brain, spleen, prostate and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=22050031; PubMed=12054613; Masuda Y., Takatsu Y., Terao Y., Kumano S., Ishibashi Y., Suenaga M., Abe M., Tukusumi S., Watanabe T., Shintani Y., Yamada T., Hinuma S., Inatomi N., Ohtaki T., Onda H., Fujino M.; Iliatomi N., Ohtaki T., Onda H., Fujino M.; Iliganda for two orphan G-protein-coupled receptors."; Hiochem. SUBCELULUAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Widely expressed in peripheral tissues with the highest level in the splean and moderate levels in the adipose tissues, thymus, lung, kidney, testis, uterus and small intestine.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Inatomi N., Ohtaki T., Onda H., Fujino M.;

"Isolation and identification of EG-VEGF/prokineticins as cognate
ligands for two orphan G-protein-coupled receptors.";
Blochem. Biophys. Res. Commun. 293:396-402(2002).
-!- FUNCTION: Receptor for prokineticin 1. Exclusively coupled to the
G(q) subclass of heteromeric G proteins. Activation leads to
mobilization of calcium, stimulation of phosphoinositide turnover
and activation of p44/p42 mitogen-activated protein kinase (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
